

Short Answer Activity

Thursday, June 23 2016 11:43 AM

How might teachers and students use Book Creator to create content?

Student Answer

passion project books

as a place to collect and document their paper and pencil work

A childrens story that students create then add a video of signing the story for full access. Can later use to discuss similarities and differences in ASL and English.

compile student thinking about a topic

Modify curriculum to create content at a student's reading level so they can participate in class.

I could have my students use BOOK Creator to create a short story or poem about the cycle of Photosynthesis and Cellular Respiration to help them remember all of the different parts, organelles and equations they often forget. I like it!

interactive notebook samples/templates

Use with the adult learner, use to show a model lesson and offer explanations about the authentic use of tecnologia in the lesson.

model of specific genre writing

explained elaboration.... wrote a picture story that showed building on one small moment

Never used, but what about journaling or their

"journal/notes" book for the year, six weeks, semester, with all information from the period, including the EE for examples and how-tos. New kids coming in can get a copy to catch them up.

make a template book for student repoes

cultural knowledge-- different topics food, music, etc.

connecting activities- each teacher (in PD) shares ideas ofr teaching a concept on ipad - take away is amteaching idea book

How to use a new app or tool in the classroom.
front loading students with some important science vocabulary

Took photos of images from a Zac Power book and added simplified text and audio as a read along for struggling readers

a collection of mentor sentences by skill

My Comp Tech class created recipe books in Book Creator.

portfolio and proof of student work and mastery-- maybe to earn a "badge"

Interactive Journals

student do a bio of themselves for the class
we had students go around the school and take pictures of various simple machines, they created a book explaining how they helped make work easier

I think ThingLink would be great for a flipped classroom pre assessment or assignment!

Project Based Learning (PBL)

students become the teachers and created lesson plans and find materials. some students chose to create a book to teach their lesson

math journals, books for younger grade levels to teach concepts, tutorial books to show learners a different voice, jounaling, LOVE the idea of

creating a book to explain a personal experience

Allow students to do a book review for other students to watch

to preteach science concepts before a lab. to collect visual, auditory, and text data. Then have students create their own debrief of the lab including using the visual and other data to support their own analysis and conclusions. Then share in bulb to build a student digital journal/portfolio over time.

Excited to share this with my math teachers! I love the idea of using Desmos in a book format! Teaching ESL next year and thinking students can create glossary of terms to use in each class. create books "as authors" to share with others at different grades

Students published their fairy tales. For the cover they were able to draw their own or import images from creative commons.

replace report cards

My students created children's books in Spanish analyzing political cartoons

Science inquiry projects

using the new comic strip function students are creating books about another country. Instead of slapping information they can only use a small number of words in a caption to support the images they use.

students wrote a Math Fairy story (that includes math problems and answers) they shared them with students in younger grades
