

## Short Answer Activity

Thursday, June 23 2016 12:07 PM

How might teachers and students use ThingLink to create content?

### Student Answer

student created. content

Have students collaborate and add resources to most missed test problems.

create plans to send to other teachers to help teach unit

self assessment - annotate examples where

students think they met success criteria

we use it for The Outsiders, where kids can listen to music that is talked about in the book, or

referenced in the book

I made one while playing with it using a map of my city and added pictures, videos and comments on features of our small town.

I've had students use ThingLink in student

produced projects. Several of my students use it to cite some of their sources for information or

graphics they got from the web.

i like to make them to help students with revision

<https://www.thinglink.com/scene/495347033549307906>

Students took picture of socialstudies textbook

images then groups added comments

show thinking of thier math.

i have usedthinglink as a teacher to preteach. i

am looking forward to using thinglink for students to create

using it with guided reading...differentiation---red

group clicks the red links to see specific videos, books, sight words

blue group sees their specific directions, and so

on!! @soozie62

Created thinglinks for science TEK

take a group picture & add nubbins that house  
student blog links  
paragraph revision work - nubbins show revision  
analyzing political cartoons  
bell/warmup thinking
